

TuffWrap[®] Installations Projects PHARMACEUTICAL

Pharmaceutical Production Line Open During Installation

OVERVIEW

TuffWrap[®] Installations C.O.R.E. Frameless Walls and Pocket Door enabled Pharmaceutical Manufacturer's production floor to remain open during installation of new equipment.

CHALLENGE

A Pharmaceutical Manufacturer was renovating and expanding its facility. A concern was that the renovations and installation of new equipment would be a risk of shutting down the production line. In addition, the manufacturing area needed to be kept free of dust and debris.

SOLUTION

To keep the pharmaceutical manufacturer's production facility operational TuffWrap C.O.R.E. frameless walls were installed. C.O.R.E. Frameless Walls are designed by TuffWrap to offer the best dust and debris protection while avoiding downtime. These temporary frameless walls were used to separate the active lines from the construction, meaning sales activity wouldn't have to slow down to accommodate the work. The frameless walls have an innovative scrim design and a four-layer polyethylene material that enables a custom fit and available door openings. To ensure that crew and employees had easy access to and from the showroom a durable Pocket Door was installed.

CONCLUSION

It was important for the Pharmaceutical Manufacturer’s production line to maintain its regular schedule without interruption. Equally important was the cleanliness of the manufacturing area. TuffWrap’s customizable C.O.R.E. Frameless Walls safely separated the work environment from the construction zone. The temporary plastic walls ensured that the workspace was fully operational during the renovation, while the pocket door made it easy for people to slide it open and close.

There’s no stopping industrial construction, but TuffWrap is here to stop the dust and debris damage it can cause. TuffWrap® Installations’ innovative dust, debris, and construction containment solutions keep companies safe, clean, and operational during construction and repairs.
